

PC WERTH SOUNDFIELD PLAYS A PART IN SCHOOL'S EXCELLENT OFSTED REPORT

Moulton School, a mixed Primary school in Northwich, Cheshire, with 198 pupils, first installed PC Werth Soundfield systems to help their Hearing Impaired pupils. But it soon became apparent that all pupils were benefitting from the systems' ability to clarify everything their teachers said – reducing requests for repeats, eliminating the old excuse of "I didn't hear what you said!", and compensating for undeveloped language and comprehension skills. Now all eight classrooms in the school have a PC Werth FrontRow Pro Digital system fitted.

The school's excellent management, academic outlook and test results derive from an enthusiastic and highly motivated Head teacher, staff and school community. Once they'd seen Soundfield in action they recognised that Soundfield systems from PC Werth were a great way to implement many of their goals for inclusion, language development and academic achievement. Moulton School achieved an Outstanding Grade in their January 2008 OFSTED inspection. Even the OFSTED Inspector was impressed by their Soundfield systems!

Extracted from OFSTED Report on Moulton School, Northwich, Cheshire, 30 January 2008. Inspection number 310489.

"This is an outstanding school that provides excellent value for money. Because it is so well led and managed, pupils' achievements are extremely good, they behave impeccably and develop into very concerned young citizens. Pupils know they are well looked after and they feel safe in the knowledge that if they have any concerns they will be listened to and if necessary, action will be taken."

"All staff work diligently and successfully to provide pupils with a rich curriculum. In the classroom, there is a good balance between traditional teaching and activities that pupils devise and carry out themselves. The school has made excellent improvement since the last inspection in its use of information and communication technology (ICT). This is now very creative and adds much value to pupils' learning. **For example, in most classes, teachers use headset microphones to clarify what they say, helping pupils to follow instructions and to promote better understanding. Together with daily, focused phonics lessons, this helps pupils to overcome any weaknesses in their spelling.**"

Paul Bamber, Lead Inspector, said in his letter to the school's pupils:

"I was most impressed with your teachers' use of headsets and with Year 5 pupils using handsets to answer questions."
